

Submit a pdf file listing (a) topics you would like to lead / cover in class (i.e., your inclass presentations), (b) preliminary ideas on semester project, and (c) topics in your wishlist that you would like to be covered.

I would like to cover putting an application on a cloud platform. I want to be able to use the cloud efficiently and effectively. The ability to access anything and everything from one source is what drew me to this class. I would like to be able to build a fully usable app and put it on a cloud platform and use it for my final project. I am currently creating a social application for couples. My wish list would obviously learn how to put an application on the cloud. So all the information could be able to access anywhere, and not have to pay for anything except storage you are using. I would love to learn how the cloud works, how people maintain it. The cloud is something that people don't really understand, but it is a very neat tool that we have at our disposal. Now if we could find an algorithm to make things smaller to store.

Parker Loomis.
